SUMMARY

I am a Machine Learning Engineer with 3+ years of experience building end-to-end Classical ML systems in banking, primarily focused on CRM and customer analytics. Experienced in uplift modeling, transactional behavior modeling, feature engineering selection, A/B testing and production batch ML pipelines.

SKILLS

Programming:	Python, SQL
ML Stack:	PyTorch, scikit-learn, NumPy, Pandas, SciPy, CatBoost, XGBoost, LightGBM, Git, GitLab, Linux, Docker, MLflow, Airflow, PySpark, Matplotlib, Seaborn, PostgreSQL, Greenplum, Tensorflow, Keras, FastAPI
ML Field Competencies:	Classic ML, DL, Time Series, Pricing, Uplift, Ranking, Matching, Model Optimization, Feature Engineering, Feature Selection, Feature Importance, Validation, Model Evaluation, A/B Testing, FinTech, Data Preprocessing, Model Ensembles, Model Calibration
Languages:	Russian (Native), English (B2), German (A2)

WORK EXPERIENCE (3+ YEARS)

PSB Bank

March 2023 - August 2025

My role involved developing and maintaining CRM and customer analytics ML systems at a top-10 Russian bank serving 6M+ retail and 350K+ business customers. I worked on customer retention, transactional behavior modeling, including end-to-end batch pipelines, A/B testing, feature engineering & selection, model validation and production monitoring.

- Developed and maintained churn prediction model from CatBoost MVP to calibrated via Isotonic Regression uplift x-learner model trained on randomized exploration data, validated through AUQC and per-decile Confidence Interval calculation via Bootstrap.
- Built feature selection pipeline with pre-model variance and hierarchical clustering of multicollinear features filters and post-model permutation importance, RFE and SHAP values analysis which reduced the number of features from 3000+ to 27.
- Built a transactional behavior and FMCD segmentation system for retail debit and credit card customers. Developed 8 multi-output CatBoost regression models forecasting customer activity across 8 MCC groups on a 1 month horizon; predictions were used for dynamic segmentation and cashback personalization, increasing average transaction amount per customer in targeted categories by 23%.

PSB Market

September 2025 - Present

My role involved developing ML solutions for B2B customer acquisition and lead prioritization within the PSB business ecosystem.

- Developed an uplift-based lead prioritization system for SME current-account acquisition using a CatBoost-based T-Learner trained on randomized call/no-call data; achieved 2x RKO openings at the same outbound call volume compared with heuristic targeting.

EDUCATION

Bachelor's Degree in Data Science at MISIS

COURSES & PROFESSIONAL DEVELOPMENT

• Karpov Courses - Hard ML	2024
• Deep Learning School by MIPT	2023
